Department of Computer Science
West Chester University

Software Refactoring

- Refactoring is a behavior preserving code transformation
 - e.g., rename

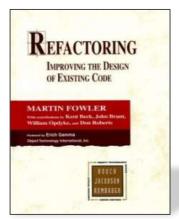

```
class Bank {
   void deposit(int dollars) {
   void addOneDollar() {
      deposit(1);
   void addTenDollars() {
      deposit(10);
```

```
class Bank {
   void save (int dollars) {
   void addOneDollar() {
      save (1);
   void addTenDollars(){
      save (10);
```

Refactoring Tools

- Fowler's web site lists over 90 refactorings
 - ~3 refactorings are added each year
 - e.g., rename, move, extract, pull-up, push down, ...

- Today's software tools offer built-in refactorings
 - e.g., Eclipse, NetBeans, IntelliJ IDEA, ...

Research Questions

- What is the average time passed before a bug is looked at?
- How long does it take for a refactoring bug to be fixed?
- How many bugs won't be fixed?
- How many duplicate bug reports exist?
- How long a bug has remained in the Bugzilla system?
- •

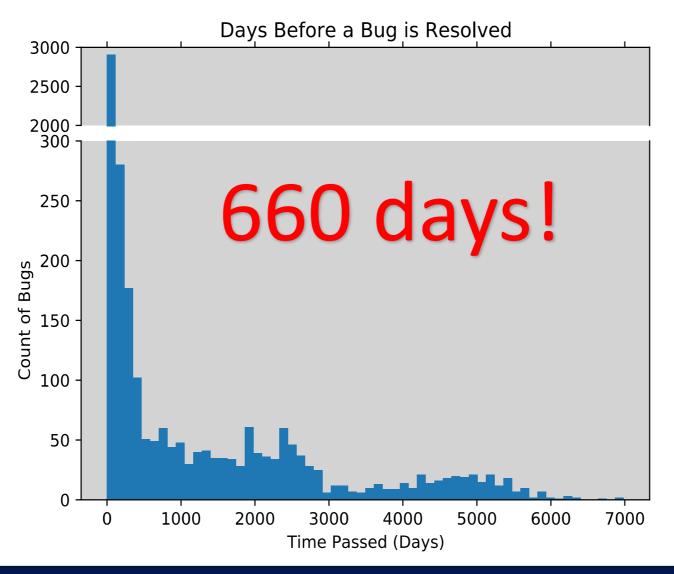

[RQ #1] Average time passed before a bug is FIRST looked at

[RQ #2] Average Time taken for a bug to be resolved

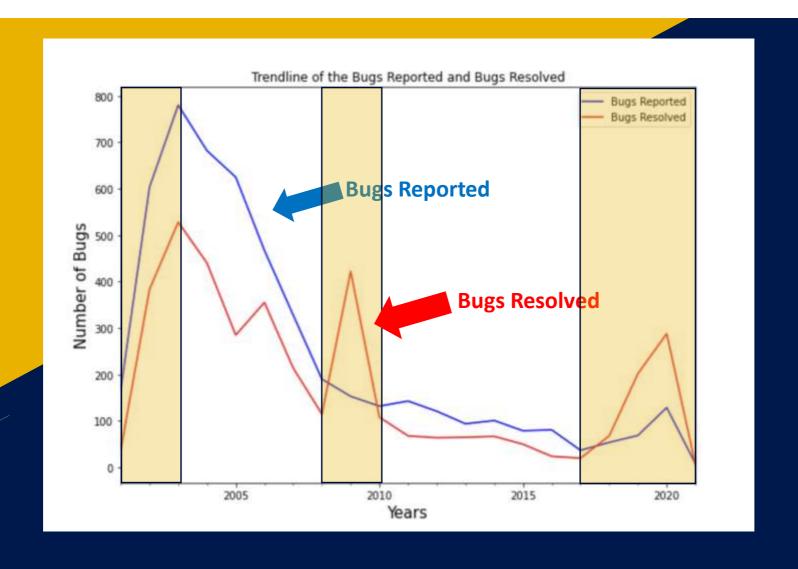

[RQ #3] DUPLICATE and WONTFIX Bugs

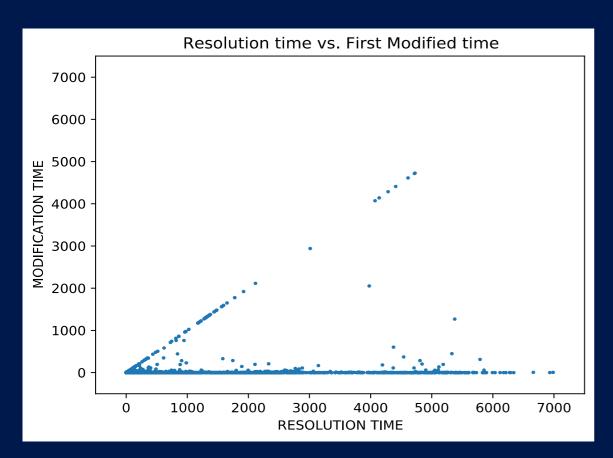

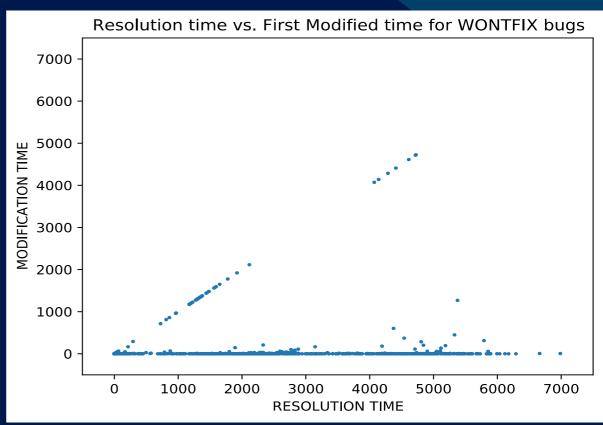

Resolutions	DUPLICATE	FIXED	INVALID	WONTFIX	WORKSFORME	Total
Frequency	742	2423	139	929	423	5047
Percent	14.7	48.1	2.8	18.4	8.4	100

[RQ #5] Resolution Time vs First Modified Time

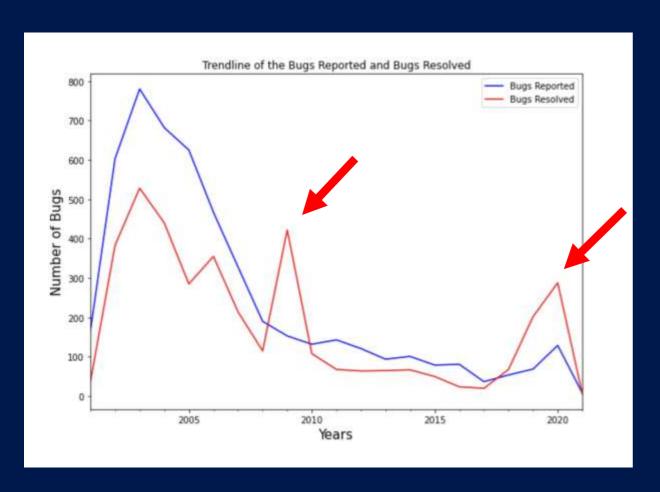

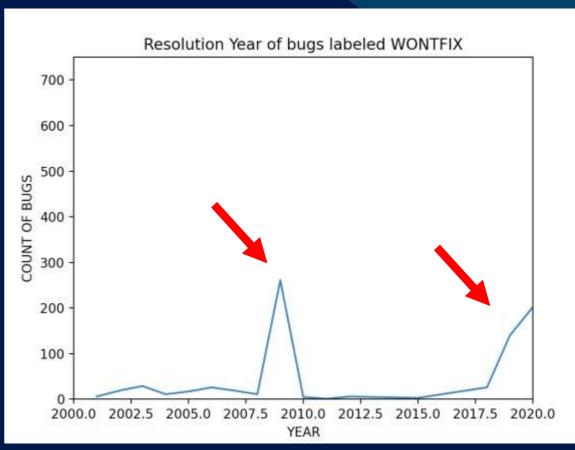

[RQ #6] Resolution Time vs First Modified Time Excluding WONTFIX Bugs

[RQ #7] WONTFIX vs. Resolution Trendline Comparison

Reasons for the spikes in 2009 and 2019-2020

Conclusion

- Eclipse Refactoring does not always preserve the original behavior like expected
- On average, it took about a month for a bug to be first looked at
- Average time taken to resolve a bug was 660 days, almost two years!
- 20% bugs won't be fixed and 15% are duplicates
- Eclipse IDE has plenty of room for improvement!

Any Questions?
